Where the Frame Comes From
1,904 records retrieved
55 queries, 5 venue sources
1,445 with an open PDF
536 retained by screen
259 extracted full texts
the corpus audited
1,703 candidate windows
704 eligible by majority
Stage 1 is documented but not re-executable; everything below is.
What the Instrument Asks
Five coordinates, recorded on both sides
C1 evidence state corpus, retriever, top-k
C2 origin / capability access, budget, scope
C3 intervention excluded from the rule
C4 outcome / unit what is measured, per what
C5 policy / utility action set and its prices
One decision rule
1 C1, C2, C4, C5 all match survives
2 a matched operating point exists narrows
3 otherwise undefined
C3 always differs — that is what a comparison is for — so it is recorded and never decisive.
Which Judgment Survives
Provenance
transported or re-implemented?
inter-judge κ 0.55
vs. reference 0.906 baseline 0.794
recovered — and validated on real windows
Verdict
does the quoted gap survive?
inter-judge κ 0.06 ceiling 0.46
vs. reference 0.816 baseline 0.772
not recovered — barely beats a constant
An automated screen can read a comparison. It cannot adjudicate one.
